

Know How to Install Limeplayer on Windows PC

To use the Showbox, you must use the **limeplayer** application, a basic video player tool. In order to use the Showbox app, the user is required to install Lime Player on Firestick. You are then in the proper location to obtain it. You must get the Lime Player from independent sources because it is not available in the Amazon App store.

To watch all of your favorite TV Shows, Movies, and other content on Showbox, you must have the Lime Player program. Suddenly, they declared the notification to all the users but ended in failure to upload the Software on all platforms except Android. Therefore, in Firestick, you must sideload the **limeplayer**.

What is Limeplayer?

The simple and excellent video player LimePlayer enables viewing of all streaming multimedia videos. Additionally, you can also use the app to stream any content using the video's URL. The application was created specifically for Android devices but is also available as an APK file for use on other platforms.

It is a user-friendly program that works with all Firestick models, including Firestick, Fire TV, Firestick 4K, and Fire TV Cube. But it functions perfectly with the Showbox program. Showbox has established a connection with the **limeplayer** program and provided a warning stating "Showbox requires Lime Player." Lime Player is a straightforward video player with modest playback features.

How to Install Lime Player on Windows PC?

If you enjoy using a Lime player on Firestick, we also have a method to explain how to use it on Windows. Windows typically has support. exe files, much like what Android supports. APK files.

However, there isn't an exe version for the **limeplayer** program anywhere online. As a result, working with the APK file is necessary. Fortunately, you can run any APK file using free software that is readily available online. You may use this to run not only Lime Player but also any other Android game or program you like. The program is known as an emulator and is offered on the official website under the name bluestacks.

This program can be compared to an Android operating system that runs as a part of your Windows operating system. As a result, it also has a lot of requirements of its own and uses a lot of your PC's storage, memory, and processing power. Therefore, we advise against downloading it unless your computer is powerful , with at least 4 GB of RAM and more than 100 GB of free space as a minimum.

The procedures to download and install Lime Player using Bluestacks on a Windows PC are listed below.

1. First, go to the official website of Bluestacks and download and install it on your computer.
2. Launch Bluestacks and log in with your Google account as you would do on a mobile device.
3. You will actually feel familiar now that the ui is of Android only.
4. Search for the **limeplayer** in the Google Play Store. The app is simple to install because it is offered in the official Android store.
5. Check the app drawer to locate the app after installation, then click to start it.
