# DIFFERENCE BETWEEN ERC-20 AND TRC-20 TOKEN STANDARDS

ERC-20 and TRC-20 are token standards used on different blockchain platforms. ERC-20 is the most common standard on the Ethereum blockchain, while TRC-20 is utilized on the TRON blockchain. Both standards define rules for creating and interacting with tokens.

However, there are technical differences between them, such as the underlying technology, programming languages, and features, requiring adaptations when developing or transferring tokens between these platforms.

LBM Solutions is the best Crypto Token Development Company serving worldwide.

# DIFFERENCE BETWEEN EXCHANGE TOKEN AND EQUITY TOKEN

Exchange tokens and equity tokens differ in their fundamental characteristics. Exchange tokens, such as cryptocurrencies, are primarily designed as digital assets for transactions and stores of value. They do not represent ownership or rights in a company or asset. On the other hand, equity tokens are issued to represent ownership in a company, granting holders rights, dividends, and voting privileges. Equity tokens align with traditional securities and provide a direct stake in the underlying entity.

LBM Solutions is the top Crypto Token Development Company serving worldwide.
